General Information

What are Geocode Files?

Geocode files are data exports of city/location records from the PC*MILER and PC*MILER|Rail databases. The exported information is sorted into groups and put into a text file or .csv file format. The files contain lists of cities, place names, ZIP/Postal Codes, Standard Point Location Codes, rail station names, and/or rail-related identification codes by version and by product, depending on the file selected. There are twelve Geocode Files available as described in the "Available Files" section below.

Files can be opened in Notepad, WordPad or in a spreadsheets program. Due to the size of some files and the speed of the computer you are using, the files may take a few minutes to open. If you receive a message saying that Notepad or WordPad is not responding, we recommend using a different text file utility.

File Usage Restrictions

All geocode files are copyrighted works of ALK Technologies, Inc. (ALK) and its licensors. All rights reserved. Geocode Files are provided by ALK strictly for use in conjunction with the corresponding PC*MILER program, on computers and by users for which the corresponding PC*MILER program and the files are legally licensed, as evidenced by a written Supplemental License Agreement signed by an authorized representative of the recipient. Usage contrary to the foregoing may be subject to civil and/or criminal penalties. If you believe you received a copy of any Geocode File in error, you are requested to return the email received to pcmsupport@alk.com with a brief explanation and then delete all copies of the received email correspondence and its attachments from your computer and email system. You do not have a license to forward the received email and/or its attachments to any third party.

Important Notes Related to Geocode Files

Many files are saved in Unicode text format and include characters outside the 0 to 127 ASCII range. Some place names include special characters such as Õ, é, and ü. It is recommended that such files be opened using UTF-8 or Arial Unicode MS format so that all characters display appropriately. To do so, if you are using Notepad go to File > Open then make an appropriate selection in the Encoding drop down list before opening the file.

In some geocode files, you may see a double comma in a record. This indicates that the information for the identified category of data is not available in the database. For example, some files that include ZIP/Postal Codes do not include codes for every location; therefore, the ZIP/PostalCode category will show a double comma.

Files are based on database information included in the version release of PC*MILER and PC*MILER|Rail. For some products quarterly releases of US ZIP Code data are available. There are no quarterly releases of this data in Geocode File format.

For files that include latitude/longitude points, lat/long values are included without the decimal point. They are to be interpreted as ddd.dddddd, i.e. the integer values need to be divided by 1 million to obtain the latitude and longitude in decimal format.

If you are looking for Mexican Postal Code information, please directly contact GeoPostcodes.com to purchase your own license for the GeoPC Mexico dataset. ALK does not have a redistribution license with GeoPostcodes that would allow users to work with their postal code data in any context outside of its use within the PC*MILER application. For more information, please go to http://www.geopostcodes.com/Mexico.

Additional Information

Select Enterprise Solutions

PC*MILER is the industry's leading off-the-shelf integrated, street-level routing and mileage solution. More than 95% of North American for hire carriers, logistics companies and the majority of the Fortune 500 rely on PC*MILER to maximize revenues and minimize costs, while providing their vehicles and shipments the safest, most cost-effective routing available today.

PC*MILER|Worldwide is point-to-point routing, mileage and mapping software that generates routes, distances, maps and driving directions in over 230 countries around the world. PC*MILER|Worldwide generates exact US and worldwide DoD distances for freight rating, in compliance with the US Department of Defense (DoD) and GSA distances for approved freight rating and billing.

PC*MILER|Rail generates point-to-point routes over the complete North American railroad system. PC*MILER|Rail can be used to minimize empty haulage costs by tracking empty and loaded mileage by rail car, carrier, and state. See routes on a map and generate detailed route reports that include mileage summaries by state and railroad, in addition to leg and cumulative miles for via points and major cities.

CANADIAN POSTAL CODES data enhances the PC*MILER database with six-digit Canadian Postal Codes. It enables users to search and display corresponding city/province names for stop entry along a route.

STANDARD POINT LOCATION CODES (SPLC) can be added to the PC*MILER database to generate routes for rating and freight bill auditing. A SPLC provides each point originating freight and each point receiving freight in North America with a unique code number that identifies the point by its geographic location.
